Author Index—Volume 41 (2002)

(The issue number is given in front of page numbers)

Alonso-Mallo, I. and B. Cano, Spectral/Rosenbrock discretizations without order reduction for linear parabolic problems (2) 247–268
Andrade, M.G., see **do Val, J.B.R.** (4) 459–479

Balac, S. and G. Caloz, Induced magnetic field computations using a boundary integral formulation (3) 345–367
Beccaria, M., Numerical algorithm for the calculation of the ground states in the $U_qSU(2)$ symmetric spin-$\frac{1}{2}$ Heisenberg chain (2) 269–281
Belokon, T.V., see **Krukier, L.A.** (1) 89–105
Bentbib, A.H., Solving the full rank interval least squares problem (2) 283–294
Benzi, M. and M. Tůma, A parallel solver for large-scale Markov chains (1) 135–153
Beyn, W.-J. and B.M. Garay, Estimates of variable stepsize Runge–Kutta methods for sectorial evolution equations with nonsmooth data (3) 369–400
Brezinski, C., Biorthogonal vector sequence transformations and Padé approximation of vector series (4) 437–442
Bröker, O. and M.J. Grote, Sparse approximate inverse smoothers for geometric and algebraic multigrid (1) 61–80
Büttner, J. and B. Simeon, Runge–Kutta methods in elastoplasticity (4) 443–458

Caloz, G., see **Balac, S.** (3) 345–367
Cano, B., see **Alonso-Mallo, I.** (2) 247–268
Chikina, L.G., see **Krukier, L.A.** (1) 89–105
Cvetković, L., Some convergence conditions for a class of parallel decomposition-type linear relaxation methods (1) 81–87

do Val, J.B.R. and M.G. Andrade, On mean value solutions for the Helmholtz equation on square grids (4) 459–479
Dufour, E., see **Vuik, C.** (1) 219–233

Echebest, N., see **Scolnik, H.** (4) 499–513
el Yaakoubi, L., see **Vuik, C.** (1) 219–233

Farto, J.M., see **González, A.B.** (2) 295–304
Fujino, S., GPBiCG(m, ℓ): A hybrid of BiCGSTAB and GPBiCG methods with efficiency and robustness (1) 107–117

Garay, B.M., see **Beyn, W.-J.** (3) 369–400
García, A., see **González, A.B.** (2) 295–304
González, A.B., P. Martín, A. García and J.M. Farto, Increasing the accuracy in the numerical integration of perturbed oscillators with new methods (2) 295–304
Grote, M.J., see **Bröker, O.** (1) 61–80
Guardarucci, M.T., see **Scolnik, H.** (4) 499–513
Gutknecht, M.H. and M. Rozložník, A framework for generalized conjugate gradient methods—with special emphasis on contributions by Rüdiger Weiss (1) 7–22
Gutknecht, M.H., see **Röllin, S.** (1) 119–133
Gutknecht, M.H., see **Schönauer, W.** (1) 1–6

Häfner, H. and W. Schönauer, The integration of different variants of the (I)LU algorithm in the LINSOL program package (1) 39–59

0168-9274/2002 Published by Elsevier Science B.V. on behalf of IMACS.
PII: S0168-9274(02)00164-2

Häfner, H., see **Schönauer, W.** (1) 23– 37
Henson, V.E. and U.M. Yang, *Boomer-AMG*: A parallel algebraic multigrid solver and preconditioner (1) 155–177
Hild, P. and P. Laborde, Quadratic finite element methods for unilateral contact problems (3) 401–421
Hu, Q. and G. Liang, Acceleration of the non-symmetrized two-level iteration (2) 305–323

Kojima, M., see **Zhang, S.-L.** (1) 235–245
Koschinski, C., New methods for adapting and for approximating inverses as preconditioners (1) 179–218
Krukier, L.A., L.G. Chikina and T.V. Belokon, Triangular skew-symmetric iterative solvers for strongly nonsymmetric positive real linear system of equations (1) 89–105

Laborde, P., see **Hild, P.** (3) 401–421
Lembarki, A., Quasi-linear sequence transformations and their construction (4) 481–497
Liang, G., see **Hu, Q.** (2) 305–323

Martín, P., see **González, A.B.** (2) 295–304

Nakata, K., see **Zhang, S.-L.** (1) 235–245

Röllin, S. and M.H. Gutknecht, Variations of Zhang's Lanczos-type product method (1) 119–133
Rozložník, M., see **Gutknecht, M.H.** (1) 7– 22

Schönauer, W. and M.H. Gutknecht, Preface (1) 1– 6
Schönauer, W. and H. Häfner, Numerical experiments to optimize the use of (I)LU preconditioning in the iterative linear solver package LINSOL (1) 23– 37
Schönauer, W., see **Häfner, H.** (1) 39– 59
Scolnik, H., N. Echebest, M.T. Guardarucci and M.C. Vacchino, A class of optimized row projection methods for solving large nonsymmetric linear systems (4) 499–513
Segal, A., see **Vuik, C.** (1) 219–233
Sidilkover, D., Factorizable schemes for the equations of fluid flow (3) 423–436
Simeon, B., see **Büttner, J.** (4) 443–458
Sobey, I., see **Sousa, E.** (2) 325–344
Sousa, E. and I. Sobey, On the influence of numerical boundary conditions (2) 325–344

Tůma, M., see **Benzi, M.** (1) 135–153

Vacchino, M.C., see **Scolnik, H.** (4) 499–513
Vuik, C., A. Segal, L. el Yaakoubi and E. Dufour, A comparison of various deflation vectors applied to elliptic problems with discontinuous coefficients (1) 219–233

Wang, X. and X. Ye, Superconvergence analysis for the Navier–Stokes equations (4) 515–527

Yang, U.M., see **Henson, V.E.** (1) 155–177
Ye, X., see **Wang, X.** (4) 515–527

Zhang, S.-L., K. Nakata and M. Kojima, Incomplete orthogonalization preconditioners for solving large and dense linear systems which arise from Semidefinite Programming (1) 235–245
